

My lichen texture map

Name / initials: _____

Date / time: _____

1 Find the patch again

Place / landmark: _____

Surface: bark / wall / stone / other: _____

Tree / material, if known (or unknown): _____

Height above ground: ____ cm / m

Time looking: ____ minutes

Approximate; blank if not recorded.

This visit: sun / shade / uncertain

Looks: dry / wet / uncertain

Context photo: _____

Close photo / no photos: _____

Optional approx. width: ____ mm / cm (or not measured)

For scale: ruler beside the patch, in the same plane, without touching it.

2 Draw what you see

Texture sketch

Locator sketch

--

Codes: 1 crust-like · 2 leaf-like · 3 bushy · ? other / uncertain

3 = small branching tufts, upright or hanging. Add colour notes and an edge arrow.

Leave the patch untouched. The grid helps place features; it has no fixed scale and is not a scientific sampling grid.

I can see: _____

I would need to check: _____

Possible identity (or uncertain): _____

3 Optional second patch

Location / surface: _____

Time: ____ min; this visit: sun / shade / uncertain; dry / wet / uncertain

One visible difference: _____

Two possible explanations I have not tested:

1. _____

2. _____

Colour is not a species count. "Not seen" does not mean absent.

Observation only; no air-pollution score.
